Readme

MediTalk is a medical assistant model designed to assist users by providing general health-related information based on research and expert knowledge. Trained using **LLAMA 3.1**, this model responds to queries with empathy, clarity, and professionalism, while also ensuring sensitive or inappropriate questions are addressed with polite negations. The model has been fine-tuned using the **lavita/ChatDoctor-HealthCareMagic-100k** dataset from Hugging Face, making it suitable for medical-related works.

The model is available for use on **Ollama** and **Hugging Face**, and can be interacted with similarly to GPT models.

Features

- **General Medical Information:** MediTalk provides clear and concise responses to common health-related queries.
- **Polite Negation for Inappropriate Questions:** If a user asks an awkward or inappropriate question, MediTalk responds with a polite negation like "I'm afraid I can't answer that. Please ask something else

related to health.”

- **Fine-Tuned for Medical Content:** The model is fine-tuned using the **lavita/ChatDoctor-HealthCareMagic-100k** dataset for more relevant medical responses.
- **Maximum Tokens per Response:** The model provides responses with a maximum of 512 tokens.

Setup and Installation

Prerequisites

- **Ollama:** Ensure you have Ollama installed on your system.
- **Download:** Converse with the model by running the following command:

```
ollama run Elixpo/LlamaMedicine
```

Scientific Parameters:

- **Parameters:** 760M
- **Layers:** 16
- **Size:** 4.9GB
- **Precision:** 4bits
- **Train Precision:** bf16
- **Chat Template:** Llama 3.1
- **Mother Model:** unsloth/llama-3.2-1b-instruct-bnb-4bit
- **Epoches:** 60
- **GPU:** T4 x2
- **System Requirements:** GPU > 4GB | CUDA Pipelined
- **Learning Rate:** 2e-4
- **warmup_steps:** 5
- **Dataset Format:** Shared_GPT
- **Trainer:** SFT_Trainer
- **Primary Dataset** ($\frac{1}{5}$): Elixpo/llamaMediTalk

Key Updates:

1. **Training with LLAMA 3.1:** Mentioned that the model is trained using LLAMA 3.1.
2. **Fine-tuned with Dataset:** Added information about the fine-tuning using the **lavita/ChatDoctor-HealthCareMagic-100k** dataset from Hugging Face.

3. **Model Availability:** Clearly stated the model's availability on **Ollama** and **Hugging Face**.
4. **Response Token Limit:** Included the maximum token limit (512) for responses.
5. **Usage Example:** Added a command to converse with the model and example questions.

This should provide a comprehensive overview of your model and its capabilities!

Model Availability

- **Ollama Facility:** The model is available for use on Ollama. You can access and run the model at <https://ollama.com/Elixpo/LlamaMedicine>.
- **Hugging Face:** The model is also available for download or direct use on Hugging Face at [Elixpo/LlamaMedicine](#).

Customization

- **System Instructions:** Modify the system instructions in the `ModelFile` to adjust the assistant's behavior.
- **Fine-Tuning:** The model has been fine-tuned using the **lavita/ChatDoctor-HealthCareMagic-100k** dataset but can be further fine-tuned with other datasets to specialize in specific medical fields.

License

This project is licensed under the MIT License - see the LICENSE file for details.

Acknowledgments

- **LLAMA 3.1:** Powered by LLAMA models.
- **Ollama:** Used for model deployment and management.
- **Hugging Face:** Fine-tuned using **lavita/ChatDoctor-HealthCareMagic-100k** dataset.
- **Medical Databases:** The model provides general knowledge, but it does not replace professional medical advice.
