OpenEMR

[OpenEMR](#) is a Free and Open Source electronic health records and medical practice management application. It features fully integrated electronic health records, practice management, scheduling, electronic billing, internationalization, free support, a vibrant community, and a whole lot more. It runs on Windows, Linux, Mac OS X, and many other platforms.

For Developers

If using OpenEMR directly from the code repository, then the following commands will build OpenEMR (Node.js version 22.* is required) :

```
composer install --no-dev
npm install
npm run build
composer dump-autoload -o
```

--

Multi-agent framework with multiple agents collaborating like an AI-powered trading company.

TradingAgents Chinese Enhanced Edition

License [Apache 2.0](#) Python [3.10+](#) Version [cn-0.1.15](#) docs [中文文档](#)
基于 [TauricResearch/TradingAgents](#)

🔥 Latest version **cn-0.1.15** : A major upgrade to the developer experience and LLM ecosystem! New support for Qianfan large models, a complete development toolchain, academic research materials, and enterprise-level workflow specifications!

🔥 Core Features : Native OpenAI support | Full Google AI integration | Custom endpoint configuration | Intelligent model selection | Support for multiple LLM providers | Persistent model selection | Docker containerized deployment | Professional report export | Full A-share support | Chinese localization

A Chinese financial trading decision-making framework based on a multi-agent large language model . Optimized for Chinese users, it provides comprehensive analysis capabilities for A-shares, Hong Kong stocks, and US stocks.

Major upgrade of LLM ecosystem

- **Qianfan large model support** : Baidu Qianfan (ERNIE) large model full integration added
- **LLM adapter refactor** : unified OpenAI-compatible adapter architecture
- **Multi-vendor support** : Support more domestic large model providers
- **Integration Guide** : Complete LLM integration development documentation and testing tools

Academic research support

- **TradingAgents Paper** : Full Chinese Translation and In-Depth Analysis
- **Technical Blog** : Detailed technical analysis and implementation principle interpretation
- **Academic materials** : PDF papers and related research materials

Developer experience upgrade

- **Development workflow** : standardized development process and branch management specifications
- **Installation Verification** : Complete installation test and verification script
- **Documentation Refactoring** : Structured documentation system and quick start guide
- **PR template** : Standardized Pull Request template and code review process

Enterprise-grade toolchain

- **Branch protection** : GitHub branch protection strategy and security rules
- **Emergency Procedures** : Complete emergency handling and troubleshooting procedures
- **Testing Framework** : Enhanced test coverage and verification tools
- **Deployment Guide** : Enterprise-Grade Deployment and Configuration Management

User rights management system

- **Complete user management** : new user registration, login, and permission control functions
- **Role permissions** : Support multi-level user roles and permissions management
- **Session Management** : Secure user session and state management
- **User activity log** : Complete user operation record and audit function

Web user authentication system

- **Login component** : modern user login interface
- **Authentication Manager** : unified user authentication and authorization management
- **Security enhancements** : password encryption, session security and other security mechanisms
- **User Dashboard** : Personalized dashboard of user activity

Data management optimization

- **MongoDB integration enhancements** : Improved MongoDB connectivity and data management
- **Data Catalog Reorganization** : Optimized Data Storage Structure and Management
- **Data Migration Script** : Complete data migration and backup tool
- **Cache optimization** : Improve data loading and analysis result caching performance

Test coverage improvement

- **Functional test scripts** : 6 new special functional test scripts added
- **Tool Handler Testing** : Google Tool Handler Fix Verification
- **Boot auto-hide test** : UI interactive function test
- **Online tool configuration test** : tool configuration and selection logic test
- **Real-world testing** : End-to-end testing in real-world scenarios
- **US stock independence test** : US stock analysis function independence verification

Native OpenAI endpoint support

- **Custom OpenAI endpoints** : support configuring any OpenAI-compatible API endpoints
- **Flexible model selection** : You can use any OpenAI format model, not limited to official models
- **Smart Adapter** : Added native OpenAI adapter to provide better compatibility and performance
- **Configuration Management** : Unified endpoint and model configuration management system

Google AI ecosystem fully integrated

- **Three major Google AI packages support** : langchain-google-genai, google-generativeai, google-genai
- **9 verified models** : gemini-2.5-pro, gemini-2.5-flash, gemini-2.0-flash and other latest models
- **Google Tool Processor** : A dedicated Google AI tool call processor
- **Intelligent downgrade mechanism** : Automatically downgrade to basic functions when advanced functions fail

LLM adapter architecture optimization

- **GoogleOpenAIAdapter** : Added Google AI's OpenAI compatible adapter
- **Unified interface** : All LLM providers use a unified calling interface
- **Error handling enhancements** : Improved exception handling and automatic retry mechanism
- **Performance Monitoring** : Add LLM call performance monitoring and statistics

Intelligent optimization of the web interface

- **Smart model selection** : Automatically select the best model based on availability
- **KeyError fix** : Completely solve the KeyError problem in model selection
- **UI responsiveness optimization** : Improve the responsiveness and user experience of model switching
- **Error prompts** : More friendly error prompts and solution suggestions

🔗 Intelligent news analysis module

- **Smart News Filter** : AI-based news relevance scoring and quality assessment
- **Multi-level filtering mechanism** : basic filtering, enhanced filtering, integrated filtering three-level processing
- **News quality assessment** : Automatically identify and filter low-quality, duplicate, and irrelevant news
- **Unified news tool** : Integrate multiple news sources and provide a unified news acquisition interface

🔧 Technical fixes and optimizations

- **DashScope adapter fix** : resolve tool call compatibility issues
- **DeepSeek infinite loop fix** : Fixed infinite loop issue in news analyst
- **LLM tool call enhancement** : Improve the reliability and stability of tool calls
- **News Retrieval Optimization** : Enhanced news data acquisition and processing capabilities

📁 Improve testing and documentation

- **Comprehensive test coverage** : 15+ new test files added to cover all new features
- **Detailed technical documentation** : 8 new technical analysis reports and repair documents added
- **User Guide Improvement** : Added news filtering usage guide and best practices
- **Demo script** : Provides a complete demo of news filtering functions

🧠 Core Features

👤 Multi-agent collaborative architecture

- **Professional division of labor** : four major analysts: fundamentals, technical analysis, news analysis, and social media analysis
- **Structured Debate** : Bullish/Bearish Researchers Conduct In-Depth Analysis
- **Intelligent Decision Making** : Traders make final investment recommendations based on all inputs
- **Risk Management** : Multi-level risk assessment and management mechanism

💻 Web interface display
